Inspection maintenance note

ENGINEERING INTELLIGENCE LAB | SYNTHETIC DEMO EVIDENCE

Scope and record identity

Record: DEMO-MNT-2026-010. Revision 1. Generated for M3 testing.

This note is fictional evidence for a synthetic inspection investigation.

Use structured inspection measurements to determine which station changed.

The note describes a maintenance event, not a proven incident root cause.

Routine checks for S01, S02 and S04 showed no recorded setpoint change.

The illumination and exposure adjustment record is on page 2.

Illumination and exposure record

ENGINEERING INTELLIGENCE LAB | SYNTHETIC DEMO EVIDENCE

S03 adjustment - 10 October 2026

Station S03 received an illumination program and camera exposure change at 2026-10-10T00:00:00. The recorded settings below are synthetic. Inspect illumination uniformity and verify camera exposure against the CSV.

Station	Parameter	Before	After
S03	Illumination setpoint (lux)	600	340
S03	Camera exposure (microseconds)	2400	800

Interpretation limits

A simultaneous false-ejection increase may be associated with these changes. Correlation does not establish causation. Sensor alignment, product variation and other operational changes remain alternative explanations. Do not treat the settings table as a measurement of actual illumination.
